

New people affected 6/18/2020
Each one is a person not a number

New cases in Franklin Township: 7
Total cases in Franklin Township: 1260
New fatalities reported in Franklin Township: 0
Total fatalities reported in Franklin Township: 126
Total number of LTC deaths: 61

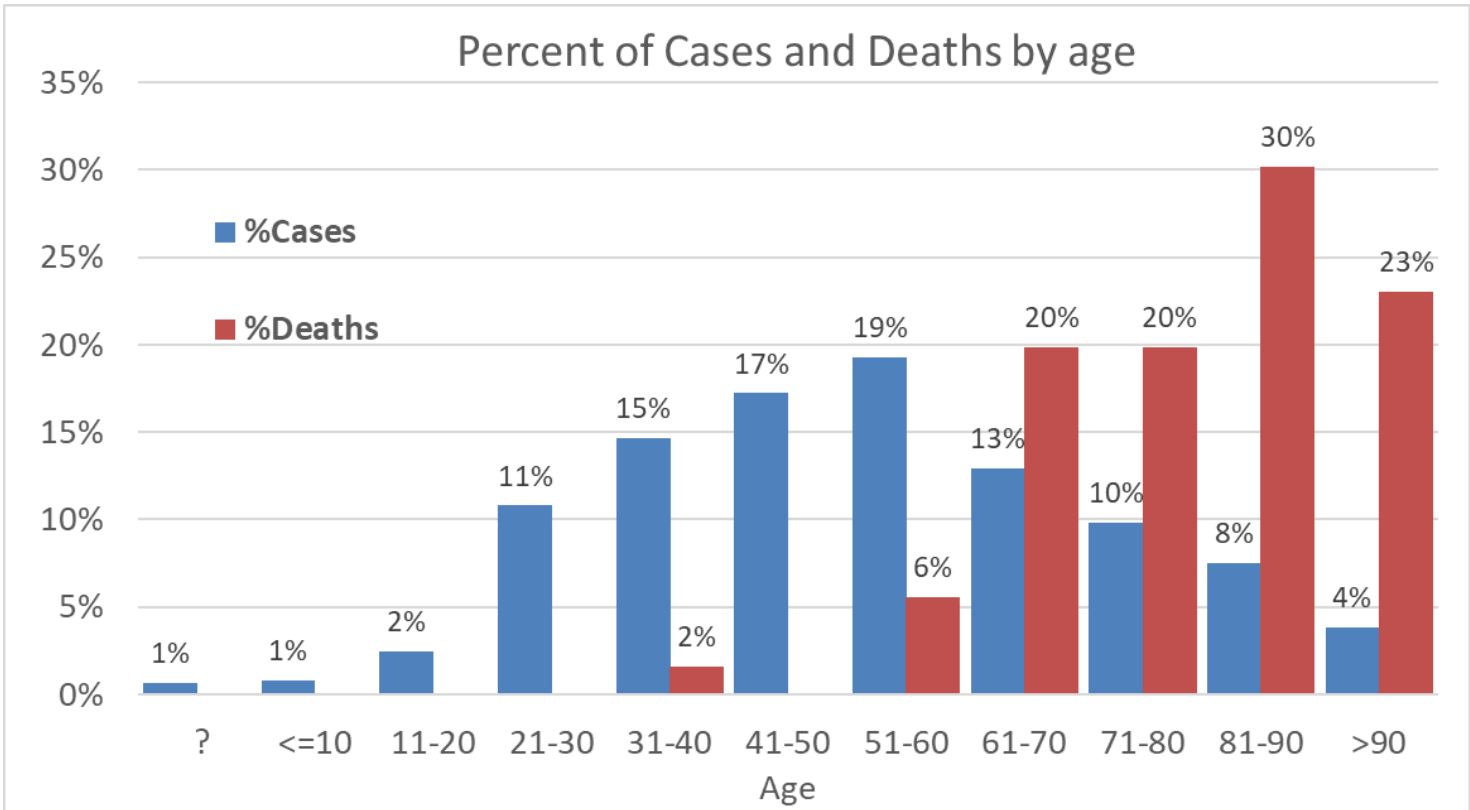

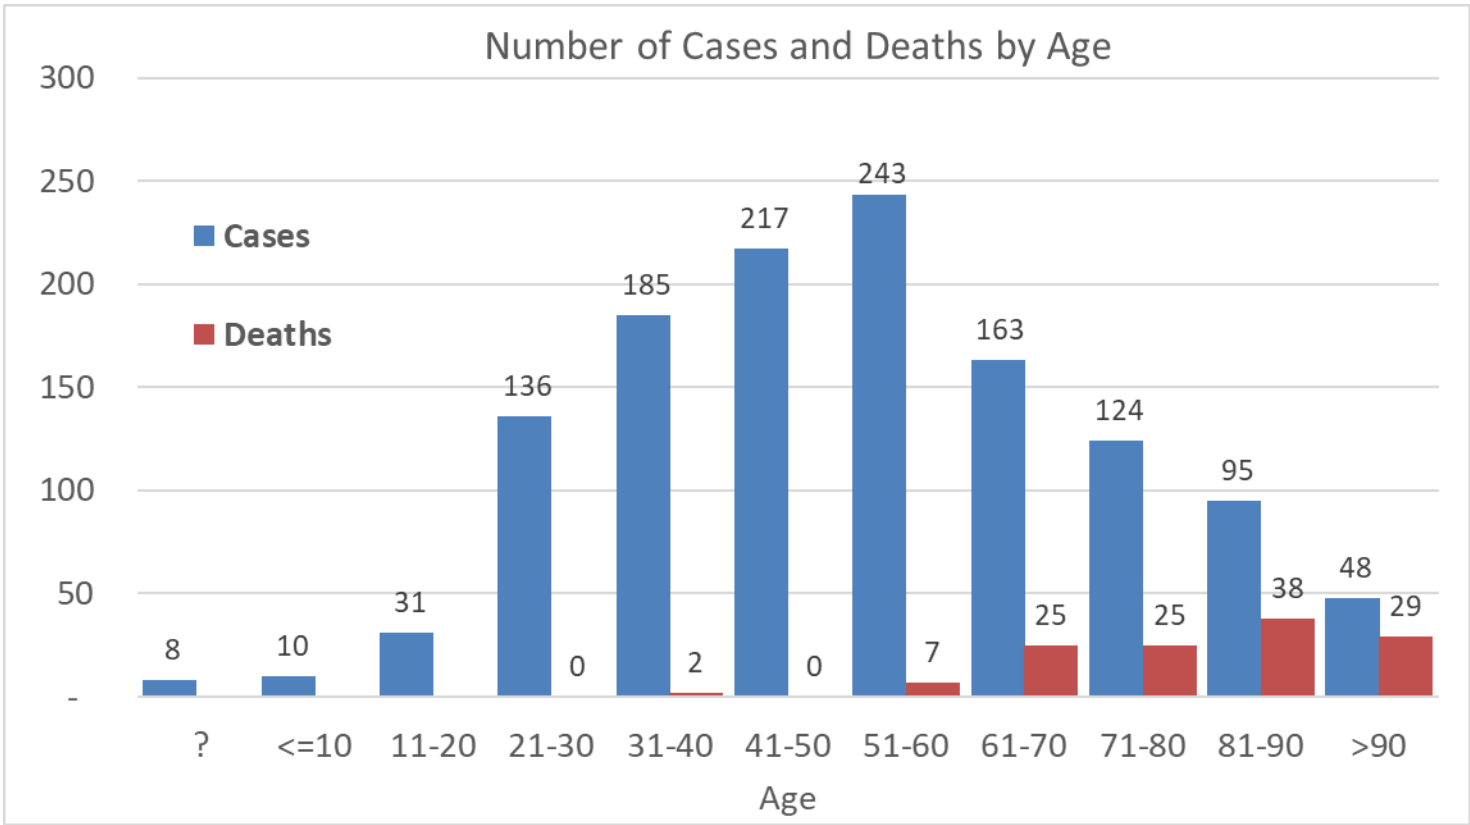

30 year old	52 year old	95 year old
36 year old	74 year old	
46 year old	87 year old	

We have had an increase in cases for the last 3 days, so I inquired if there was a reason. I've talked of the fog of war in the past and it appears to apply here. I called the County health Officer and learned, 12 of 25 Franklin cases this week (6/15-6/18) have been from LTCs. Moreover, of the 12, nine were from tests that were done in mid-May, not recent cases. That still averages 4/day which is above what we were getting used to seeing. This is not reflected in the state LTC data yet.

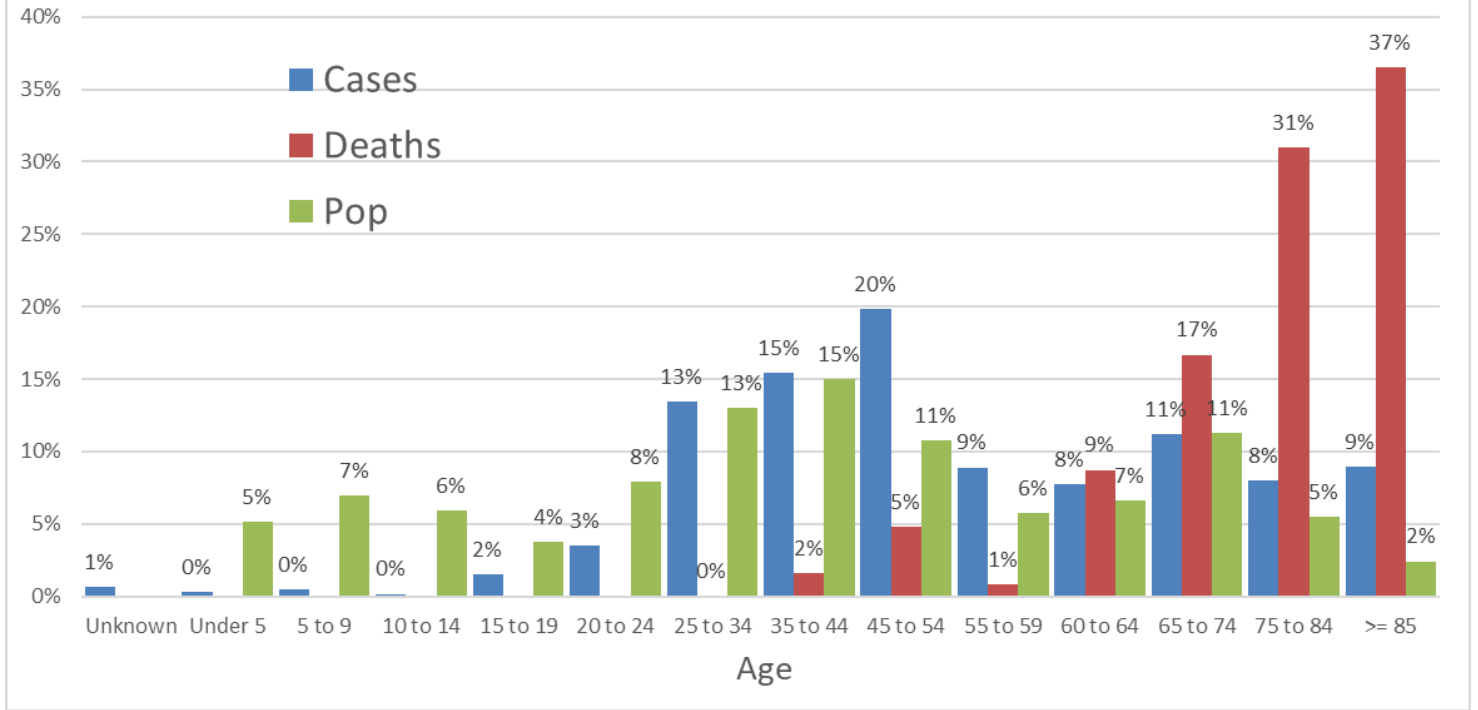

When I know more, I'll let you know.

I'll skip the calculated numbers because they are sensitive to the timing of the cases and that information is lacking.

Graphs are on the next 2 pages.

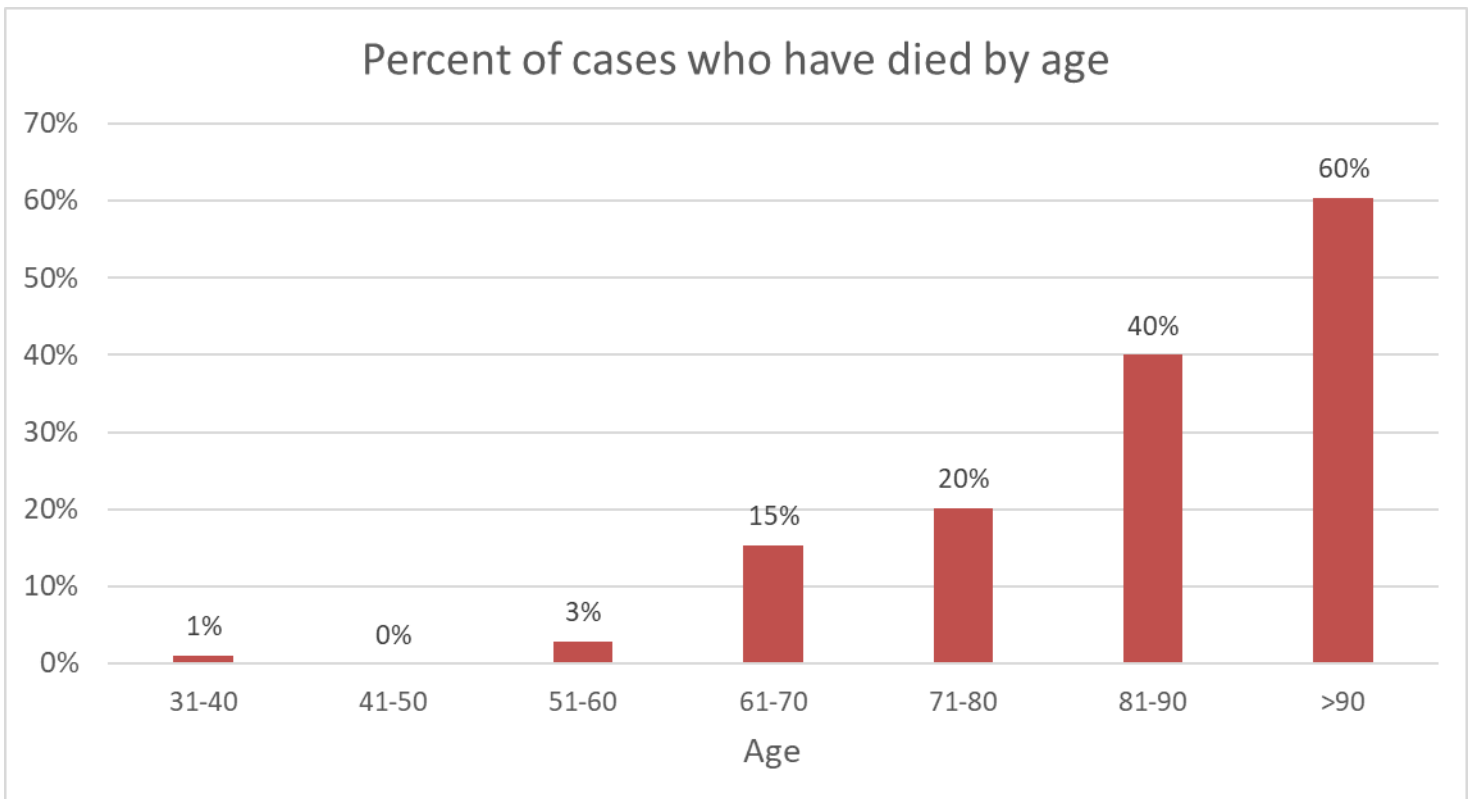

Percent Cases, Deaths and Population by Age

The following chart shows the percentage of people who were infected in each group who sadly died.

Percent of cases who have died by age

My typical disclaimers and sources

I do not answer questions about location of the positives. I do not have that information. For the reasons why please see my post on March 31

<http://mayorkramer.com/files/mar31.html#4>

Please see the Somerset Co. status map.

<https://www.co.somerset.nj.us/government/public-health-safety/health-department/services/disease-prevention/covid-19-status-map>

We have gotten more specificity on why the Twp.'s count of the number of total cases for Franklin differs from the county cases on their map. If an infected person who lives in Franklin moves to a care facility out of Franklin, then the county does not include them in the total number. We do. If someone who lives in another town becomes infected and then comes to Franklin, we do not count them. The county does.
