These are at the same long term care facility (LTC) as I reported on [9/18](#). They are regularly testing asymptomatic patients. These patients are asymptomatic. The health department is checking to see if these patients were previously identified as positive so I will not post a “new total infections”.

Infection control protocols are in place. The facility is cooperating with the County Health Department.

Repeating what I wrote previously, it is out of the Township’s jurisdiction to monitor LTCs. Just as it would be if there was a hospital in town. We have however, often asked if they needed assistance and provide it when we are able.

New deaths 0
Total deaths 140
